

Market design – why?

Challenges to the electricity system

A market for renewables and renewables in the market

Making the market fit for RES

Transparency and non-
discrimination (e.g.
curtailment)

Flexibility (incl DSR,
review of conventional
support)

Market rules compatible
with RES (e.g. gate
closure)

Improved short term
markets (ID, BAL),
bidding zones

Integrating RES into the market

More coord. approach
to support schemes

RES providing system
services

Exposure to market
signals (dispatch rules,
balancing
responsibility)

Higher share of
revenues from the
market
